

FOR IMMEDIATE RELEASE:

C-Search Releases the C-Search Domino Connector for Google – Locate your Notes information using the Google Search Appliance.

Wellington, New Zealand - August 01, 2007 – C-Search Limited today announced the release of the C-Search Domino Connector for Google, a secure, highly flexible, platform independent crawler for Notes databases that connects your Domino environment to the Google Search Appliance allowing users to discover Notes content alongside the many other data sources that are supported by Google.

The Connector uses the C-Search crawler for Notes, designed and developed by Notes developers with an in depth understanding of the design structure, principles and advantages of the Notes database environment. As such the system has a number of features rarely seen in a Notes database crawler.

Core features of the Connector include:

Supports all Notes databases	Notes database design awareness
Platform independent	Replica and regional awareness
Full and “Selective” content crawling	Index roll-back features
Dynamic generation of search results	Full event logging
Display results in browser or Notes client	Crawler API
Multiple deployment modes	Monitor API
Document level security	

A variety of licensing options are available and the system runs on any Domino server R6 or later.
